Thank You.

This is ZENOG SCIENTIFIC's first software catalog. In the past 5 years the emphasis of our programming has been in scientific programming, hence our name. The ZX81 and its twin the TIMEX SINCLAIR 1000 allow the user to accomplish complex mathematical tasks as well as store information. They are perhaps the only computers to truly deserve the title of "Personal Computer".

As you can see from our list of software, we offer a wide variety of programs - all at very reasonable prices. All require at least 16K of additional memory. None of our programs are imported from England.

We are constantly on the search for good quality software. If you have such programs, send us a description, as detailed as possible. DO NOT SEND the program. We will then contact you for contractual agreements.

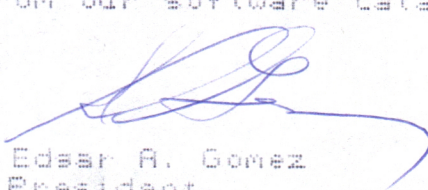

Although we are a software company, we would like to market hardware as well. Please contact us if you likewise have a product that needs marketing.

In January of 1983, we are going to publish a bi-monthly newsletter. The newsletter will be named "REM 1000". We will cover the following topics:

- Beginners Programming
- Software Tips
- Hardware & Software Reviews
- Programs

Although there are other publications on the market, we believe that ours will be most helpful to the thousands of new computer users. We welcome, in fact, we need your letters on software problems, tips (hints), hardware additions, and reviews of products, in order to help your fellow ZX81/TS 1000 users. We, of course, will answer the letters in "REM 1000" and will include numerous software routines. Orders are being accepted for a yearly subscription (6 issues). It is \$15.00 U.S. Included is a 10% discount on all ZENOG SCIENTIFIC's software.

Please use the order form from our software catalog sheet.
